

Aluminium Ramps

Our Aluminium Ramps are constructed onsite by our experienced and skilled staff at our new facility in Keysborough, Victoria. Aluminium is a strong and rigid material that is also lightweight, making it an excellent material for the construction of ramps. Our loading ramps are made from aluminium alloy 6061 T6 and have a strong, lightweight design.

They provide safe loading in warehouses, construction sites, domestic use and other workplace environments whether it be for the general public such as disability ramps or access for forklifts & trolleys our ramps are all constructed with sturdiness and durability that will last against corrosion.

Custom made with or with out handrails and the option of 3mm checker plate deck or 13mm grid mesh deck.
