

Now, there's a ceiling diffuser that warms your feet

The high performance ceiling
diffuser that works better than
under floor heating

- Jets warm air right down to the floor
- Easy to adjust damper control
- Substantial energy savings when compared to other ceiling diffusers
- Total shut-off

PALTECH
DOWNJET

PALTECH DOWNJET

JET WARM AIR DOWN TO YOUR FEET

When warm air is delivered into a room using conventional ceiling diffusers, it rises before reaching the floor, resulting in warm air at head height and cold air at your feet.

The Paltech Downjet is designed to jet warm air right down to the floor, which then drags warm air from the ceiling back down. This is far more efficient than conventional diffusers at delivering required heat to the occupied zone in your home. (ie below two metres).

CONSERVE ENERGY

- SHUT OFF ROOMS NOT IN USE.

The Paltech Downjet is the first round ceiling diffuser with airflow dampers featuring total shut off - adjusted by turning the centre knob. Now you can shut off rooms not in use to conserve energy. (Consult your installer to determine the maximum number of outlets that can be closed off at a time).

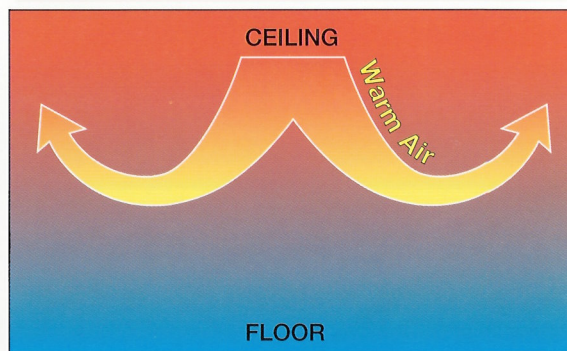

SUPERB APPEARANCE

Designed using computer-aided modelling, the Paltech Downjet has a superb installed appearance. Flush mounted, with an easy clean non-reflective surface they blend tastefully with all decors.

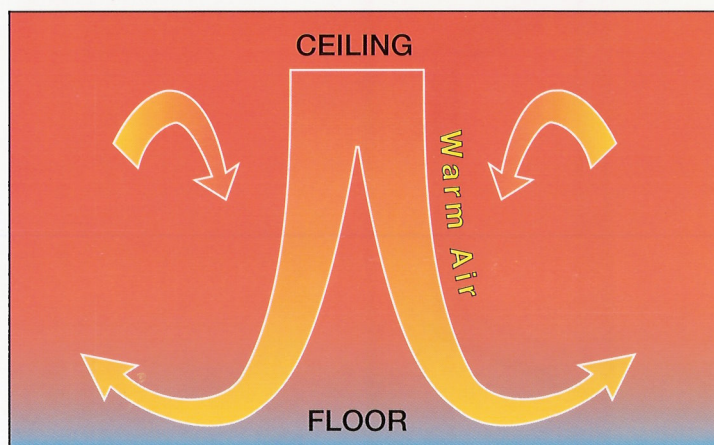

10 YEAR GUARANTEE

The Paltech Downjet is designed and manufactured in Australia to the very highest standards, and is covered by a ten year unconditional replacement warranty to be free from manufacturing defects.
