

RC 5000 Marine Hose Reel

BRIERLEY

HOSE AND HANDLING

The RC5000 Marine wash down and drinking water hose is multipurpose for the quayside mooring facility. Easily mounted where a water supply is available. The RC5000 hose reel cleans up the wharf of loose and dangerous hose lines that people so easily trip over.

A convenient way to store up to 15 metres of hose line in a neat and simple way, ready for use when required. Non corrosive high impact P/P case is UV resistant for many years of service.

Each RC5000 comes complete with carry handle, mounting bracket, locking pin and a connector hose line to the reel body. The brass and stainless components means that your harbour side hose reel is going to be there for a long time. Boating safety extends to the mooring facilities and whether you are a keen fisherman or just a boatie out for some fun the RC5000 removes one more potential for accidents on the pontoon or dock.

Technical Specifications
